Farm Credit Mid-America
Network Engineer
1601 UPS Drive
Louisville, KY 40223

To whom it may concern,

I am interested in applying for the Network Engineer position that recently became available at Farm Credit Mid-America. I feel that my past work experiences/certifications, relationships with the WAN Team, and contributions to the association as an intern and trainee make me an excellent candidate for this position.

Having recently completed my degree in the Computer Information Systems program at the University of Louisville, I come equipped with not only skills in the realm of technology but the most critical skill of articulating technology needs to the business and vice versa.

In addition to my bachelor's degree, I achieved Cisco Certified Entry Network Technician (CCENT) certification while employed with Farm Credit Mid-America as a trainee, and am preparing for the Cisco Certified Network Association (CCNA) certification currently.

My past life as an active duty signals Marine has given me a wide perspective on the world and technology's role on this stage. Furthermore, my work led me into challenging environments with no-fail expectations on a huge gamut of systems. While I was never the expert, I *was* the jack of all trades that could make things happen with the resources at hand. Beyond the leadership experience I gained as a non-commissioned officer, I strongly believe that this mentality "the best with the least" is what makes me, at my very core, a highly effective person.

I believe I have the skills, teamwork mentality, and drive to truly contribute to the mission of Farm Credit Mid-America.

Thank you for your consideration.

Sincerely,

Quincy Tennyson
